

Univ.-Prof. Dr. Yoshiko Kato

I consider it will be wonderful if I can accede purposefulness of ICP inc. and contribute to encourage psychologists for human well-being and peace with crossing national border.

ICP inc. has contributed to encourage many psychologists and their students across the globe by exchanging knowledge of psychology for above 70 years. However, the activity of ICP inc. is not only exchanging knowledge, but also building reliable relationship with psychologist of diverse culture. It is most attractive aspect of ICP inc. and it might be difficult for any other academic associations. Progressing rapid globalization, the necessity for collaboration between diverse cultures force. Psychologists have abilities and skills to promote the facilitation of this collaboration in consideration of human well-being and peace. For these reason, the role of ICP inc. is getting important more and more. And I decided to become a candidate of president of ICP inc.. Thank you for your reading.
